The Coal Authority awards new network managed services contract to Nowcomm

Nowcomm, the network skills, services and support company specialising in unified communications, has been awarded a managed services contract by the Coal Authority.

The agreement covers the management of the LAN infrastructure across two sites at the Coal Authority's headquarters in Mansfield. Nowcomm will work closely alongside the Coal Authority's own ICT department providing network support and proactive monitoring of performance.

Located at Mansfield, Nottinghamshire, the Coal Authority was established under the Coal Industry Act 1994 and is sponsored by the Department of Energy and Climate Change.

It works to protect the public and the environment in coal-mining areas and manage the effects of past coal-mining by working to protect old coal mines from affecting people and property, dealing with any related emergencies, helping to clean up water from coal mines and providing information about coal-mining. It also licences companies to mine coal in Britain.

“Out of all of the proposals we received, Nowcomm best understood our needs and have the necessary depth of technical expertise we were looking for”

Dan Whitt, Boyd, Senior ICT Manager, Coal Authority.

Initially managing the existing network, Nowcomm will also be monitoring future requirements and advising on changes and upgrades. “We are proud to have been awarded the contract to provide network managed services and support for the Coal Authority,” said Richard McLoughlin, Nowcomm’s managing director. “

As a Midlands based company we are always delighted to support other local organisations and to have been selected following a very competitive process underlines our strategy of continuing investment in our engineering resources”.
